

## INW\_double stage ring blowers / vacuum pumps

heat curves / temperature pressure dependence

page 1 of 1

Increased temperatures of the transferred air are directly proportional to the pressure difference. Performance curves are defined for the air transportation with the temperature 15°C set for the suction by the atmospheric pressure 1013 mbar with the permissible deviation +/- 10%. Total pressure difference is valid for the temperature of the suction air and the ambient operating temperature 25°C.
